

Track your assets on the move!

Compliance Reports and Asset Audits made easy.

AXLR8 Equipment Tracking now allows you to track assets by location, test history, asset number, owner, van, etc.

Be sure every mobile worker has the equipment they need for their job. Know what is installed at client sites.

- Construction equipment
- AV systems, Cameras and recording equipment
- Radios and walkie-talkies
- Demonstration equipment
- Point of Sale, End of aisle display units
- Vehicles
- Smart phones and other devices
- PPE
- Uniforms, hats, etc.- even bunny costumes!

Know where all your installed equipment is!

Features

Simple interfaces show you where your equipment is and what is available for jobs.

Run reports: which items need to be PAT or PUWER tested, etc.

The equipment can be yours, leased, or client equipment under your responsibility.

Locations can include vehicles which are treated as mini-warehouses to make life simple. Vehicles may also be tracked for their own testing such as MOT and other regular safety and manufacturer recommended servicing.

Asset lists for Financial Accounting or for insurance reviews are a click away.

Sign in/ out sheets – book it out and check it back in!

Inspections of equipment for your staff on site can be shortened by having all the paperwork automatically up-to-date.

History of the equipment (service, damage repairs, notes, pictures, sites used, etc.) is kept in as much detail as you require.

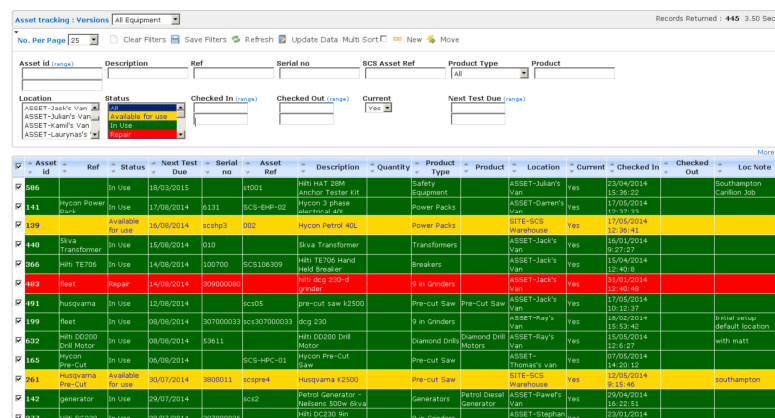

Technical Details

Cloud based service - available anywhere on a browser. No new equipment to buy or support. AXLR8 consultant (or, if trained, trained Systems Administrator) may fully configure all aspects to your business requirements.

Easy to use. Short training

Designed for ease of use and simplicity. You can quickly see what is available and select several items to allocate them to a van for a job together with an equipment list and associated test history and evidence for any site inspection.

Never have a job delayed because the equipment is mislaid or because a repair that could have been done yesterday simply did not get done.
